# Permit Central

Digital road permit platform that streamlines the process and significantly reduces the time and cost for both road authorities and applicants.

TRANSNOMIS

Permit Central is a digital road permitting service, developed alongside municipalities for use by road authorities and applicants.

Digital Records System for Authorities & Applicants

Authorities and applicants can quickly access their applications and all associated document uploads, communication logs, change logs, payment receipts and more.

Common or Custom Application Forms

In Ontario, Canada, the service supports common application forms developed and maintained by Ontario road authorities. Custom forms are also supported.

Municipal511 Integration

Applicants are able to view road closures, construction, truck routes, and cautions as they map their route, allowing them to adjust their plans and timing to work around known road use conflicts. Approved permit content can flow directly to the travel and project views in the Municipal511 public site.

Local and Regional Approaches

Applicants can apply to multiple authorities at once in cases where a plan or route involves multiple jurisdictions. For reviewers, reaching out to other road authorities for consultation takes only a single click.

Highly Efficient

Authorities can process permits with little-to-no typing, printing or filing. Applicants are kept informed of status changes automatically.

WHAT WE OFFER

- ☑ **Municipal511** for municipal and regional road authorities

- ☑ **Permit Central** an online digital road & right-of-way permitting solution

- ☑ **ITS Central** for unified control of traffic data and devices

- ☑ **VMS Central** for dynamic sign control and roadway safety

WHO WE SERVE

We have hundreds of clients across North America, including municipalities, regional and provincial road authorities, traffic control and safe work zone vendors.

WHO WE ARE

We are a technology company with expertise in intelligent transportation systems (ITS), advanced traffic management systems (ATMS) and public safety communications.
