

Municipal511

Easy-to-imbed publicly-accessible mapping system that centralizes the planning and communication of traffic disruptions.

Municipal511 is an easy-to-learn, easy-to-use road information management service. Using its intuitive map based interface, communicating closures and distributing data is faster and easier than just sending emails.

With a few clicks, mapped road closures, hazards, truck routes, restrictions and planned projects can be presented in your website, distributed to navigation and emergency responder applications, and emailed to key stakeholders – for issues taking place now and in the future.

One Unified Map

Municipal511 presents all road information for your region, including local, regional, and provincial roads. The Municipal511.ca public map can be found embedded in numerous municipal and regional government websites.

Connections & Integrations

Municipal511 connects seamlessly to a wide range of third-party apps, including Waze, Here, emergency responder systems, and your GIS.

Mapped Data Layers

In addition to the publicly-accessible mapped content, Municipal511 supports private (non-public) data mapping, management, and communications.

Permit Central Integration

Mapped content on Municipal511 is presented to permit applicants in the Transnomis Permit Central service, helping applicants to keep oversize loads on your truck routes while avoiding road use conflicts.

WHAT WE OFFER

- ✓ **Municipal511** for municipal and regional road authorities
- ✓ **Permit Central** an online digital road & right-of-way permitting solution
- ✓ **ITS Central** for unified control of traffic data and devices
- ✓ **VMS Central** for dynamic sign control and roadway safety

WHO WE SERVE

We have hundreds of clients across North America, including municipalities, regional and provincial road authorities, traffic control and safe work zone vendors.

WHO WE ARE

We are a technology company with expertise in intelligent transportation systems (ITS), advanced traffic management systems (ATMS) and public safety communications.
