

# Traffic Central

Web-based integration of traffic systems, permits, data and devices.

Traffic Central is a suite of traffic management solutions built to seamlessly integrate your traffic control devices, traffic data, processes, internal systems, and external data sources into a single, easy-to-use, map-based interface.

Traffic Central scales to your organization's size and needs, ranging from a small cloud-based application to an on-premise customized advanced traffic management system (ATMS), handling thousands of devices, permits, issues, and incidents.

• **PERMIT MANAGEMENT:** The **Permit Central** module for Traffic Central allows for roadway permit applicants (e.g. construction, oversized vehicles, utility maintenance) to apply for permission to use the right-of-way. It displays approved permits by time and location, guiding applicants to make optimal selections for their submissions. It guides both the applicant and reviewer, ensuring transparency throughout the approval process.

• **PUBLIC TRAVEL INFO:** Our popular travel information portal, **Municipal511**, shares your municipality's road closures, and construction, incidents with the public and your partner agencies. In addition, you can provide access to traffic camera images, road conditions, messages displayed on variable message signs, and more.

• **DEVICE CONTROL:** Sensors, cameras, VMS, signals, and more can be integrated to collect data, view contextual information, and provide control in Traffic Central. The system allows you to track incidents and construction, create dashboards and reports, and monitor maintenance issues.

• **TRAFFIC DATA:** Upload your manual data, loop counts, turning movement data, and bike/pedestrian counts into one system. Examine all traffic signal statistics alongside your 24/7 sensor data. View speed reports, segment metrics, turning movement diagrams, vehicle classification graphs. Seamlessly share your traffic data with your partner agencies.

## TALK TO US

Reach out to us to explore how Traffic Central can help you better manage your traffic systems and devices today.

## POPULAR MODULES

- ✓ Variable message sign control & automation
- ✓ CCTV cameras
- ✓ Travel time tracking & display
